SMART RESTAURANT QR MENU & ORDER SYSTEM

Complete Non-Technical User Manual & Operational Guide

Designed for Restaurant Owners, Managers, Kitchen Staff & Customers

1. WHAT IS THIS APPLICATION? (SYSTEM INTRODUCTION)

This is an end-to-end Smart Digital Restaurant Ordering and Management Platform.
It replaces old paper menus with interactive QR codes placed on dining tables.

Key Highlights:
* No App Download Needed: Customers simply open camera, scan QR, and browse the menu.
* Live Kitchen Alerts: Automatic audio chimes and popups when food starts cooking or gets ready.
* Instant Payments: Integrated UPI QR Scanner (GPay, PhonePe, Paytm) + Cash at counter.
* Home Delivery & Table Dine-in: Owner can enable or disable delivery mode anytime.
* Live Table Occupancy: Automatically prevents duplicate ordering on currently occupied tables.

2. BUSINESS BENEFITS FOR RESTAURANT OWNERS

1. Faster Table Turnaround: Customers order immediately without waiting for a waiter.
2. Zero Human Error: Exact customer cooking notes (e.g. 'less spicy') go straight to the chef.
3. Save Printing Costs: Add new dishes, change prices, or mark dishes out of stock instantly.
4. Interactive Waiting Games: Customers play games on their phone while waiting for food, keeping them entertained and unlocking instant 5% dining discounts.
5. Complete Live Visibility: Watch pending, cooking, ready, and completed orders from 1 screen.
6. 100% Free Cloud Infrastructure: Powered by serverless databases with zero monthly cost.

3. WHO CAN USE THIS SYSTEM? (USER ROLES)

[A] DINE-IN CUSTOMERS (TABLE GUESTS)
- Scan Table QR -> View Menu with HD images -> Place order -> Pay online or cash.

[B] KITCHEN CHEF & WAITSTAFF
- Hear audio chimes when new orders arrive -> Click 'In Kitchen' -> Click 'Food Ready'.

[C] RESTAURANT OWNER & CASHIER
- Monitor live revenue, mark cash payments, toggle delivery, and print QR codes.

PART 1: CUSTOMER ORDERING EXPERIENCE

Step-by-step workflow for guests dining in the restaurant or ordering online

STEP 1: SCANNING THE QR CODE

Customer sits at Table (e.g. Table 1) and points their phone camera at the QR standee.
A link opens instantly in Chrome or Safari (no app install or signup required).
The system automatically binds the customer session to Table 1.

STEP 2: BROWSING MENU & ADDING DISHES

Categories are tabbed at top: All, Starters, Main Course, Breads, Desserts, Beverages.
Items display Veg/Non-Veg icons, prices, descriptions, and high-definition photos.
Tap '+' button to add items into the cart with live subtotal calculation.

STEP 3: CHECKOUT & SPECIAL REQUESTS

Customer enters their Name and Mobile Number (remembered automatically for next time).
Special Cooking Notes: e.g., 'Less spicy, extra lemons, send hot' - goes straight to chef.
Choose Payment Option: 'Pay via UPI/Online' OR 'Pay Cash at Counter'.

STEP 4: LIVE STATUS TRACKING & WAITING GAMES

Instant Order Code generated (e.g. #ORD-JXT117) with live status timeline:
 * Received -> Preparing (In Kitchen) -> Food Ready -> Served / Completed
Waiting Game Challenge: Customers can play 'Triple Match' & 'Speed Reflex' while food is being cooked. Completing the 2 games awards an instant 5% bill discount!

STEP 5: RE-ORDERING (ADDING MORE ITEMS)

If guests want extra rotis, drinks, or desserts, they simply tap '+ Order More Items'.
Their details are already pre-filled, preventing any duplicate table confusion!

PART 2: RESTAURANT OWNER & KITCHEN MANAGEMENT

How staff and owners operate the dashboard, manage orders, and collect payments

1. LIVE ORDERS SCREEN (REAL-TIME NOTIFICATIONS)

* Auto-Refresh: Dashboard polls automatically every 4 seconds without manual reloads.
* Audio Chime: Distinct bell chime sounds as soon as a new order arrives.
* Notification Banner: Shows order number, table, customer name, and total amount.
* 'Enable Alerts' Toggle: Click this button once in top bar to turn on sound & alerts.

2. KITCHEN ORDER STATUS LIFECYCLE (ONE-CLICK BUTTONS)

Each order card has quick operational buttons with instant response:

[In Kitchen]: Click when chef starts preparing. Customer sees: 'Cooking in progress!'.
[Food Ready]: Click when dishes are ready on counter. Customer hears chime: 'Food Ready!'.
[Served]: Click when waiter delivers dishes to table. Order moves to completed.
[Mark Paid]: Click when customer pays cash at the counter to clear the bill.

3. FLOOR & TABLE MANAGEMENT

* View all tables at a glance (e.g., Table 1 to Table 10).
* Visual occupancy badges: Green = Available / Free, Red = Currently Occupied.
* 'Table QR Generator': Generates custom printable PDF QR standees for every table. Simply download, print, laminate, and place on tables.

4. MENU DISHES & CATEGORIES MANAGER

* Add Dishes: Upload photo, enter name, category, price, veg/non-veg, and description.
* Out of Stock Toggle: Turn dishes temporarily ON/OFF with 1 click if ingredients finish.
* Category Ordering: Organize dishes into Starters, Main Course, Drinks, etc.

5. RESTAURANT SETTINGS & DELIVERY TOGGLE

* Home Delivery Setting: Owner can turn Home Delivery ON or OFF anytime.
* UPI QR Setup: Enter restaurant UPI ID (e.g. hotel@okhdfcbank) to receive online payments.
* Operating Timings & Taxes: Configure GST/Tax percentage and opening/closing hours.

PART 3: FREQUENTLY ASKED QUESTIONS (FAQ)

Common scenarios, staff guidelines, and quick answers for daily restaurant operations

Q1: Do customers have to install an app from Google Play or Apple App Store?

A: NO. That is the biggest benefit! Customers simply open their default phone camera, scan the table QR standee, and the menu opens immediately in their browser.

Q2: How does the kitchen get notified when a new order comes in?

A: The Owner Dashboard plays a distinct audio chime (bell sound) and pops up a banner at the top of the screen showing the table number and items. Simply keep the dashboard open on a tablet or laptop in the counter/kitchen area.

Q3: What if a customer pays via UPI (Google Pay, PhonePe, Paytm)?

A: When the customer selects 'Pay via UPI', an instant Dynamic QR code is generated on their phone. Once completed, the customer screen and owner dashboard automatically turn green with a 'Payment Completed' success chime.

Q4: Can a customer add more items while eating without starting a new bill?

A: YES. They simply click '+ Order More Items' on their tracking screen. Their table and customer details remain saved, and new items append directly to their order.

Q5: What if Table 1 is occupied and someone else tries to order on Table 1?

A: The system automatically detects active occupancy. If another guest attempts to order on the same table while an order is ongoing, it prompts them to select a free table.

Q6: How does the Owner toggle Home Delivery?

A: In the Owner Dashboard -> 'Settings & Timings' -> toggle 'Allow Home Delivery'.
When turned OFF, customers can only choose Dine-in or Takeaway.

QUICK TIP FOR RESTAURANT STAFF:

Keep a dedicated Android tablet or iPad at the billing counter with sound volume high.
Click 'Enable Alerts' once at the start of the day to ensure real-time audio rings for every order.
